Ideal PA solutions for mid-sized locations combining total flexibility of use with high-performance amplification.
Features and functions that add the most

Multi-purpose, multi-function mixer/power amplifiers specifically designed for maximum versatility and cost-effective high-performance are ideal units for any PA requirement in locations such as schools and offices and other intermediate size environments. A choice of different power outputs are offered as well as functions such as paging and dual zone coverage.

Versatility plus
The A-1800 Series amplifiers are distinctive for their input versatility. Each has three mic inputs, three auxiliary inputs, an emergency input as well as a telephone paging input. Paging can be initiated and the chime function can also be set to automatically output to two zones.

Phantom power provided
The A-1800 Series of amplifiers provide phantom power to all connected microphones. Phantom power can be switched on or off as needed. The microphone inputs feature a balanced configuration with XLR connectors, allowing long cable runs without any problems.

2 Zone coverage
A-1800 Series amplifiers feature 2 speaker zones to which broadcasts can be sent independently or combined as desired. Emergency broadcasts will be heard in both zones. Even when the amplifier power is switched off, an emergency broadcast will be initiated to both zones.

Chime on input
The Mic 1 input incorporates chime on capability when the optional PM-660D Paging Microphone is used. Chime on can also be activated for the telephone paging. A selection of chime tones are available such as single, two-tone and four-tones which can either be in ascending or descending order.

Equalization
Each amplifier allows easy tonal adjustment of all output signals with bass and treble controls.

Line output
A line output is useful for adding more power in a particular zone by providing the input signal for a booster amplifier such as the P-1812.

Remote control
In an expanded system with the P-1812 amplifier, an emergency will activate the P-1812, even if it had not been switched on to enable the broadcast.

Record output
The back panel includes a record output for connecting an external recorder to archive or back up broadcasts.
most value to all-in-one PA equipment.

**Typical Connections**

- Box speaker
- Column speaker
- Horn speaker
- CD player
- Wireless tuner
- Cassette tape recorder (for REC)
- Cassette tape player
- Microphones
- Paging microphone PM-660D

**Input priority override and muting**
Each input can be set for priority override as well as mute. This facilitates making emergency announcements and messages as well as paging. Priority is in order starting with emergency, telephone paging, Mic 1* input.

* Mic 1 has priority by default unless switched or when the optional PM-660D Paging Microphone is used. Priority will also automatically decrease the levels of other inputs.

**Dual power supply**
A-1800 Series amplifiers can conveniently be operated on AC or on DC24V to suit installation requirements.

**Music On Hold (MOH) output-equipped**
For adding convenient music or messages when telephone call waiting, music from a CD or cassette player connected to the Aux 1 input will activate MOH to fill the silence.

**P-1812**
**120W Power Amplifier**

**System amplification option**
When additional power amplification is required to power more speakers in a system, the TOA P-1812 Booster Amplifier can be connected to an A-1800 Series amplifier's line out which provides an optimal level and impedance to efficiently drive the P-1812.

**Switchable input levels**
To interface properly with different equipment, input sensitivity can be switched between –10dB and 0dB.

**Emergency control**
On the back panel of amplifier is a remote-in terminal for emergency control which sets the default output level for the emergency input.

Notes:
- ±0dB = 1V
- Can be transformer-balanced with the addition of optional IT-453A input transformer.
- LINE 1 and LINE 2 outputs can be interlocked with ZONE 1 and ZONE 2 speaker selectors, respectively. (This function needs internal modification.)
- Operation when activated can be selected from the following: Turning ON the unit’s power (factory-preset) or OFF. (The OFF function needs internal modification.)
